Outline of courses to be taught by Prof Sanjay Mitra, School of Public Policy

SPV 399  India’s electricity sector in the renewables era

The course will give a quick overview of the electricity sector. It will trace the historical developments, identify the important inflexion points, assess the impact on the various stakeholders and try to evaluate the possible roadmap. It will also try to explore concepts in electricity federalism and the rise of the private sector. The course will complement several other relevant courses on the policy, economics, financing and regulatory aspects of power system operations with increasing renewable energy share. We will also talk about the technological innovations associated with the growth of the sector.

SPV 799  Public policy in the Infrastructure sector in India

Four infrastructure sectors will be examined in detail; roads and highways, ports, logistics and civil aviation. If time permits, issues in urban infrastructure will also be covered. In each case, we will look at the need for specific policy interventions, creation of the appropriate enabling environment, stakeholder responses, implementation issues and technological innovations.
